Other Diseases

Panniculitis

Dorsal longitudinal scan (A) and Power Doppler image of leg (B).

(A) Blurring of the border between dermis and subcutaneous tissue with increased thickness and echogenicity of subcutaneous tissue of anterior aspect of leg in right side image compared with the normal contralateral region.

(B) PDUS shows some Doppler signals (arrows) in thickened hyperechoic subcutaneous tissue.

PROX = proximal,
DIS = distal.

Chen, Hsin-Hua

Grey scale and power Doppler US using a Philip iU22 with a volumetric probe (4D, 5-13MHz)
